

Implementing Web Application

Date	15 November 2022
Team ID	PNT2022TMID07010
Project Name	CONTAINMENT ZONE ALERTING

CREATE API IN FLASK :

```
from flask import Flask
app = Flask(__name__)
@app.route("/") def
homepage():
    return "Hello Flask!" if
__name__ == '__main__':    app.run()
```

The screenshot shows a Visual Studio Code editor window with a file named 'first.py' containing the following Python code:

```
1 from flask import Flask
2 app = Flask(__name__)
3 @app.route("/")
4 def homepage():
5     return "Hello Flask!"
6 if __name__ == '__main__':
7     app.run()
```

Below the code editor, the 'TERMINAL' panel displays the output of running the application. It shows the Windows PowerShell prompt, the command to run the application, and the resulting output:

```
Windows PowerShell

Install the latest PowerShell for new features and improvements! https://aka.ms/PowerShell

PS C:\Users\rickob> & "C:\Program Files\Python\Python.exe" "C:\Users\rickob\code\codecademy\python\python_2021_10_21\python\flaskgy\launcher\.../first.py"
* Serving Flask app "first"
* Debug mode: off
WARNING: This is a development server. Do not use it in a production deployment. Use a production WSGI server instead.
* Running on http://127.0.0.1:5000
Press CTRL+C to quit
```

Hello Flask!
